## **MOISTURE BARRIER FOR BACKGROUND PRIMING**

- Used for priming prior to tiling or plastering, for priming walls and ceilings in wet conditions prior to finishing, for priming troublesome backgrounds before applying wallpaper, for consolidation old tiling and plastic floor covering.
- Suitable backgrounds are concrete, mortar, brick, stone, polymeric materials. Used in damp, humid and wet conditions at the temperature above +10 °C. The background must be dry and clean. The solution for the first cover is mixed in the ratio 1:1.
- Product coverage: 0.15 l/m<sup>2</sup> on solid surfaces with low moisture absorbing characteristics, two coats applied; 0.3 l/m<sup>2</sup> on water absorbing surfaces, two coats applied; and 0.5 l/m<sup>2</sup> on old tiling.

**NB! Keep from freezing!**
